

# DADiSP / ProPac

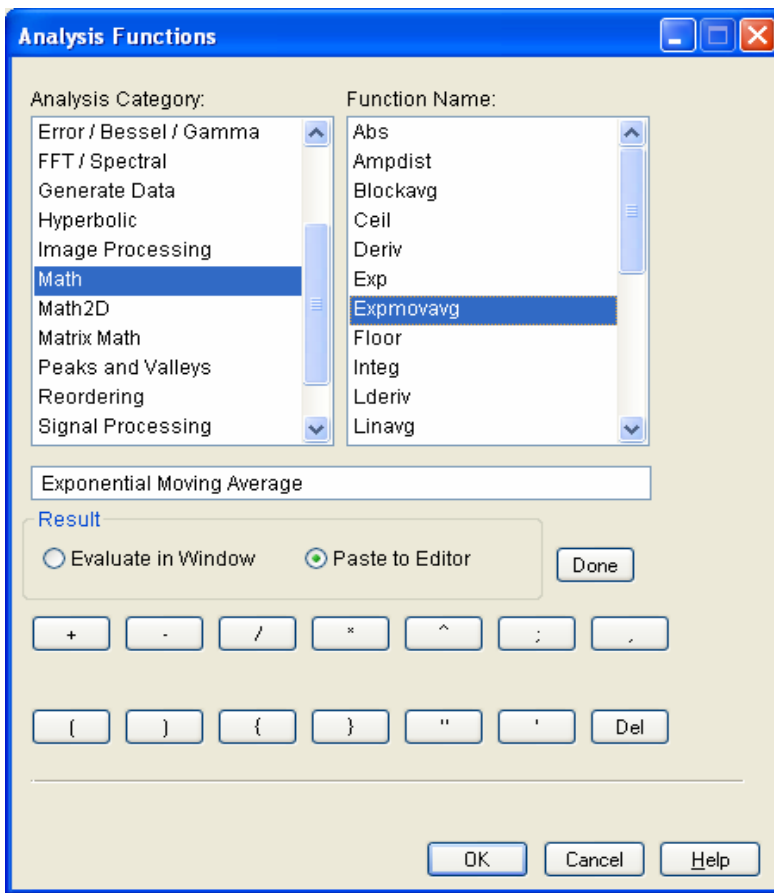

## ProPac Math Acceleration Module

DADiSP/ProPac combines the [VectorXL](#) module with the [FFTXL](#) and [MatrixXL](#) modules to provide a single, optimized numeric processing engine. Together, all three modules deliver accelerated vector math, FFT and matrix computations by using the Math Kernel Library from Intel. Speed improvements of 20% up to a factor of 50x are common.

The MKL Library provides highly optimized math and numeric analysis functions tuned specifically to Intel processors to provide outstanding performance.

### KEY FEATURES

- Simple Deployment – just Install and Run
- 20% to 5000% speed improvements
- Optimized performance on Intel Processors
- Multi-threaded Execution for even Faster Execution on Multi-Core Systems
- Speeds up virtually any Numeric Analysis

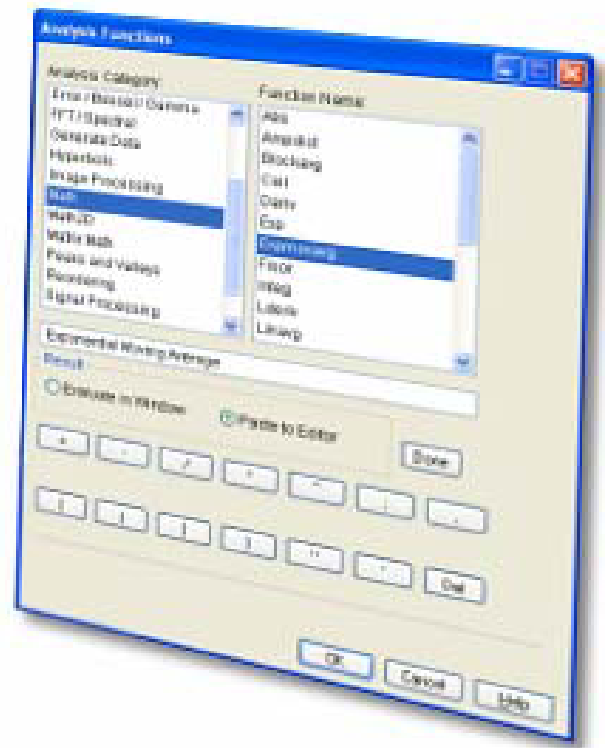

## ProPac Math Acceleration Module

Looking for an easy way to speed up your data analysis routines?

DADiSP/ProPac combines the VectorXL module with the FFTXL and MatrixXL modules to provide a single, highly optimized numeric processing engine to accelerate almost any numeric processing routine.

- [DADiSP/VectorXL](#) accelerates common vector math computations by using the Intel® Math Kernel Library (Intel® MKL). Speed improvements by 20% to 60% are common. The MKL Library provides highly optimized vector routines based on the VML Vector Math Library. The algorithms are specifically tuned to Intel processors to provide enhanced performance.
- The [DADiSP/FFTXL](#) plug-in module automatically accelerates FFT computations and FFT based analysis routines. Also based on MKL, FFTXL takes advantage of the latest instruction sets, parallelism and algorithms to yield a highly optimized FFT function. Performance gains of 2x to 10x over the standard built-in FFT function are realized to benefit new and existing FFT analysis applications.
- The [DADiSP/MatrixXL](#) Module builds upon LAPACK, Linear Algebra PACKage provided by Intel® MKL to accelerate core matrix computations. LAPACK is an industry standard software library that provides a number of matrix routines including functions to solve linear equations, least squares systems, eigenvalue and singular value decomposition problems. By exploiting the processor tuned performance of Intel® MKL LAPACK, MatrixXL delivers speed increases of 3x to 50x over the standard built-in matrix functions.

## Simple and Cost Effective

As a single, combined module, DADiSP/ProPac offers nearly a 50% cost savings over purchasing each module separately. And ProPac is completely automatic, simply install the module and vector math, FFT and matrix computations immediately run faster

- no settings to change, no code to rewrite.

Individual Modules	DADiSP/ProPac	
VectorXL:	\$495.00	✓
FFTXL:	\$495.00	✓
MatrixXL:	\$495.00	✓
Total Price:	\$1485.00	\$745.00

## Requirements

DADiSP/ProPac requires [DADiSP 6.5 B05](#) or higher. [Contact us](#) for information about updating your current version of DADiSP.

## ProPac Acceleration Module

ProPac automatically accelerates many math computations and operations. In addition, custom or built-in routines that make use of these enhanced calculations experience significant speed improvements.

## VECTOR OPERATIONS AND FUNCTIONS

$\pm$	Vector Add
$-$	Vector Subtract
$*$	Vector Multiply
$/$	Vector Divide
$\wedge$	Vector Power
<a href="#">acos</a>	Inverse Cosine
<a href="#">acosh</a>	Inverse Hyperbolic Cosine
<a href="#">asin</a>	Inverse Sine
<a href="#">asinh</a>	Inverse Hyperbolic Sine
<a href="#">atan</a>	Inverse Tangent
<a href="#">atanh</a>	Inverse Hyperbolic Tangent
<a href="#">cos</a>	Cosine
<a href="#">cosh</a>	Hyperbolic Cosine
<a href="#">sin</a>	Sine
<a href="#">sinh</a>	Hyperbolic Sine
<a href="#">tan</a>	Tangent
<a href="#">tanh</a>	Hyperbolic Tangent
<a href="#">abs</a>	Absolute Value
<a href="#">ceil</a>	Ceiling
<a href="#">exp</a>	Exponential
<a href="#">floor</a>	Floor
<a href="#">log</a>	Natural Log
<a href="#">log10</a>	Log Base 10
<a href="#">sqrt</a>	Square Root

## FFT BASED FUNCTIONS

<a href="#">cceps</a>	Complex cepstrum
<a href="#">dct</a>	Discrete cosine transform
<a href="#">dct2</a>	2D Discrete cosine transform
<a href="#">decilp</a>	Bandlimited decimation
<a href="#">facorr</a>	Auto-correlation function
<a href="#">facov</a>	Auto-covariance function
<a href="#">fcirconv</a>	Fast circular convolution
<a href="#">fconv</a>	Fast convolution
<a href="#">fdeconv</a>	Fast deconvolution
<a href="#">fft</a>	Fast Fourier Transform
<a href="#">fft2</a>	2D Fast Fourier Transform
<a href="#">finteg</a>	Frequency domain integration
<a href="#">firsamp</a>	Frequency sampling filter design
<a href="#">fpadfilt</a>	Filtering with end padding
<a href="#">fxcorr</a>	Cross-correlation function
<a href="#">fxcov</a>	Cross-covariance function
<a href="#">fzinterp</a>	Interpolation by FFT zero insertion
<a href="#">grpdelay</a>	Group delay
<a href="#">hilb</a>	Hilbert transform
<a href="#">idct</a>	Inverse discrete cosine transform
<a href="#">idct2</a>	2D Inverse discrete cosine transform
<a href="#">ifft</a>	Inverse Fast Fourier Transform
<a href="#">ifft2</a>	2D Inverse Fast Fourier Transform
<a href="#">invpsd</a>	PSD to time series
<a href="#">nfft</a>	Zero pad or time aliased FFT
<a href="#">npsd</a>	Zero pad or time aliased PSD
<a href="#">nspectrum</a>	Zero pad or time aliased spectrum
<a href="#">powspec</a>	Power spectrum
<a href="#">psd</a>	Power spectral density
<a href="#">specgram</a>	Joint time-frequency spectrum
<a href="#">sfreq</a>	S transform evaluation
<a href="#">spectrum</a>	Normalized FFT magnitude
<a href="#">rceps</a>	Real cepstrum

[zfreq](#)

Z transform evaluation

## MATRIX OPERATIONS AND FUNCTIONS

[\\*^](#)

Matrix Multiply

[^^](#)

Matrix Power

[\](#)

Matrix Solve

[balance](#)

Eigenvalues with Balancing

[chol](#)

Cholesky Decomposition

[crossprod](#)

Matrix Cross-product,  $a' *^ b$

[det](#)

Matrix Determinant

[eig](#)

Eigenvalues and Eigenvectors

[funm](#)

General Matrix Function

[hess](#)

Hessenberg Matrix Form

[inv](#)

Matrix Inverse

[linfit](#)

General Least Squares Curve Fitting

[lu](#)

LU Decomposition

[polyfit](#)

Polynomial Curve Fitting

[qr](#)

QR Decomposition

[schur](#)

Schur Decomposition

[svd](#)

Singular Value Decomposition
